

Banning to the canning of Unicorns

Unicorn's majestic, rainbow-making creatures that shouldn't be slaughtered and put in a can to eat!

By killing unicorns you are also killing the environment. Because unicorns use magic on the environment to help the trees grow and the seasons change. With no unicorns the trees and the environment will die. And if its winter and all the unicorns are gone then we will all freeze to death.

If everyone wants unicorn meat then hunters will need to slaughter more and more unicorns and they will end up going extinct and the people of the future will not know what a unicorn is.

Shopping day: I think I might get some unicorn meat. What? It's \$19.95 just for a can of meat! That's an outrage, but I will buy it any way. The next day: awesome they still have unicorn meat! I think I will buy 10 cans. Is this what you want to be spending your money on...?

Please don't slaughter these magical creatures anymore.

I support the unicorns.
